

ARCHIVE-IT SERVICE AGREEMENT
Exhibit A
Updated June 23, 2021

1. Description of Service.

1.1 The “Archive-It Service”. Internet Archive has developed a web application to provide web archiving services to organizations. This service, named “Archive-It”, is a web-based application designed for organizations interested in archiving, accessing and managing web content without needing specific technical expertise or resources (the “Service”).

1.2 Collections. The Service allows Users to login and create web collections (“Collections”), catalogue the websites associated with a Collection, archive websites in the Collection, monitor the archiving process, search and browse the Collections when complete, and access these Collections. Internet Archive will host any and all Collections created under this Agreement.

1.3 Website Access to Collections. By default the Archive-It service will make the Collections publicly available under the following URL: *http://www.archive-it.org* (the “Website”). Each Collection will be accessible via a text search engine and a software tool to render archived webpages (i.e., the Wayback machine interface). Access to a collection (either part or all) can be restricted and/or made not publicly available.

1.4 Management of collected Data. All data and information collected through the Service will be stored at one of the Internet Archive’s data centers. The Collections created through the Service and associated content from websites will be kept in a separate repository from Internet Archive’s general web archive at www.archive.org. A primary and backup copy of this data will be made available online.

2. Annual Subscription Fees and Allotments.

New joiner small schools (under 10,000 FTE) can subscribe at the lowest TB level (.125) for 2 years for the subscription cost of 1 year
